- Documentation
- Brand development
- 3D modeling
- Audio/Video editing/compositing

Work History

Job Seeker, Freelancing, Consultant, Vlogger

01/2013 to Current

While seeking full-time employment, I keep my skills up to date with small freelance, voluntary, or personal projects. I consider myself first and foremost a multimedia designer and so my hobbies focus on new media formats, current and on the horizon, particularly 3D stereoscopy, 360 video, 3D Web and their roles in emerging VR technology.

Some of my recent 3D modeling projects including a Virtual 360 video screen has made it into an official release of Anarchy Arcade currently in early access on Steam.

Intern - Web Developer

Jan Pederson, Konzept Bikefit – Slagelse

05/2012 to 08/2012

A solo Internship and final project for Web Dev, in which I deployed a Drupal CMS based site for Konzept Bikefit. Customizing the theme, modules, configuration and SEO optimization to suit the business owner's needs.

The logo, designed by me, is still in use on the website, the business visit cards and custom printed shirts.

Intern - Multimedia Design

Vikingeborgen Trelleborg – Trelleborg Alle, 4200 Slagelse

01/2010 to 07/2010

Together with two other Interns we developed a single season micro-site to advertise the annual Trelleborg Viking festival. Applying theories of marketing and communication strategy, project management and web design to produce a media rich user experience inviting site visitors to come and "experience Trelleborg". The site was hand made, with our own custom backend CMS and JS driven front-end.

Our work on the project as interns from ZIBAT, received some attention in an article for a local newspaper. We followed up the internship as a final project and received a perfect grade for skillfully applying and demonstrating our knowledge and launching the site successfully.

voluntary code contributor - community support

twecode/twine – github

12/2009 to 12/2013

Coded in JavaScript, python and special "twee code" markup for "Twine" an html/javascript based interactive Fiction Engine and python based Twine Story editing tool. Both created by Chris Klimas and additionally supported by community contributions in various github repositories. My personal mission was to solve bugs and add functionality in the form of templates and code snippets and offer them freely to the community. Some of my fixes and template code made it into several official updates. In addition I provided troubleshooting assistance to users on the community forum.

After the release of browser based Twine 2.0 editor in 2013. I felt most of the problems I wanted to solve in the legacy platform had been addressed by the original developer in his new release.
